Hello,

NVDA is well supported out of the box at this time.

However, I can write a script for it if it is necessary in the future.

Saludos,

Hi,

Actually they are more like general guidelines. I'm using NVDA myself and it seems to be the fastest screen reader with CocoMUD, though rich text is better to be disabled for performance. However, if you think of any feature that would improve accessibility with CocoMUD, don't hesitate to share. I usually try to remain screen reader independent in CocoMUD, but there are things that do not blend well for other screen readers.
