

CocoMUD client - Feature #130

Have CocoMUD recognize and read according to the go-ahead option

Description			
<p>So far, CocoMUD displays text as it arrives. It will split, particularly when receiving a large amount of data. Some servers support the GA (go-ahead) option however, and will provide it at each end of line, making wrapping text easier for clients. CocoMUD should be able to identify such a signal and, if present, should wait until it receives the completed output (ending with GA) before printing it.</p>
